

How to Secure Profits

In trading, the most important thing to do when the market presents us enough profits is to secure them by placing the SL at break-even around 10 pips.

1. Go to the trade that's in profit and click **"Chart"**
2. Tap the **crosshair (+)** at the top
 - a. **If you enter a buy**, place the crosshair just **above** your entry, and modify the trade and enter the new number in the 'Stop Loss' field.
 - b. **If you enter a sell**, place the crosshair just **below** your entry, and modify the trade and enter the new number in the 'Stop Loss' field.

Below is an example of profits secured in a BUY.
